

GreenMed – an integrated system of monitoring a patient's state of health, allowing to get a dynamic preview of data that comes from telemedical sensors.

GreenMed application is based on the authorial cloud system called GreenCloud and allows for gathering, storing and sending data on patient's state of health. Medical data are sent to a server in specified time intervals, thanks to which a patient's doctor or family may have access to it.

Four main areas of GreenMed are:

- **Medical Monitoring** - modern diagnostics in a real time,
- **Help Search** - interactive map with the nearest hospitals, medical centres and pharmacies,
- **Patient's Card** - a view on general and specialised examination results, referrals and prescriptions,
- **On-line Diagnostics** - medical consultation with a chosen specialist.
