

**Green Convert** - gas-to-electric conversion scheme for vehicles.

**Green Convert supports the development of electric vehicles and renewables markets in Poland by undertaking the following actions:**

- Conversion of combustion engine vehicles to electric ones,
- Sales of electric vehicles: both converted and new ones,
- Forming a national network of vehicle conversion,
- Development and deployment of new EV technologies.

**So far, prototypes of the following vehicles have undergone conversion:**

- improved efficiency of segregation;
- simple implementation of further revisions to waste management laws;
- easy tracking of waste collection units;
- easy access to data on fleet efficiency, potential stoppages and best waste collection routes;
- improved communication between local authorities, waste management companies and citizens.

Green Convert is looking to expand its offer to further vehicle types.
