

## Who does not measure - does not manage

The purpose of IT system solutions produced by our company in the field of BMS is centralized to manage all installations and subsystems occurring in a given object. Products from this field of application integrate all elements of infrastructure together, they allow for effective management over the entire object.

Our company's product in the field of BMS allow:

- Graphical representation of isometric view of the building with technical installations.
- remote control of systems and executing elements.
- Process automatization e.g. controlling receivers depending on schedules or sensor condition.
- Ventilation control, air conditioning and air quality based on definable parameters and atmospheric conditions.
- Monitoring and control of alarm devices, fire protection and power.
- Management of events and alarms generated by technical infrastructure elements.
- Stimulation of people's presence in the building while the owners or building managers are not present.
- Remote simulation of adverse events.
- Comprehensive personalization for applications' control access.

### Products

inos.Building  
inos.Factory

inos.Public

inos.Health  
inos.IQHouse  
inos.Mobile

### Description

Building Management System  
Industry Infrastructure Management System  
Public Infrastructure Management System  
Hospital Infrastructure Management System  
Mobile Application for Infrastructure Management System
